

AMENDMENTS TO THE DRAWINGS:

The Applicant proposes to amend the drawings as shown in the annexed copy of FIG. 6 labeled "ANNOTATED MARKED-UP DRAWING". The only change is the addition of an arrow going from block 48 to block 50, which arrow was apparently inadvertently omitted from the drawings as originally filed. Support for this change can be found on page 14 at lines 31-33, which states: "In accordance with the preferred embodiment of the invention, DICOM images 48 comprising an image header with a Study Instance UID are constructed by the host computer 20, transmitted from the Ethernet port 50, received by the Ethernet port 52, and stored on the hard disk 56 by the host computer 54." The addition of the arrow in FIG. 6 merely denotes the sending of the constructed DICOM objects 48 to the Ethernet port 50.

A new formal drawing bearing the designation "REPLACEMENT SHEET" and incorporating the aforementioned proposed amendment is also being submitted herewith.
